

## Pfizer Dental Forum

Twenty four veterinarians from central California attended the Pfizer Dental Forum held at Pioneer Equine Hospital on October 29, 2009. Dr. Travis Henry of [Midwest Equine Services](#), a renowned equine dental veterinarian led the forum which consisted of four hours of lecture followed lunch in the California sun. In the afternoon, the attendees were divided into two groups and completed wet labs in dental radiology and sedation/analgesia for the dental patient.

All veterinarians were able to take a quick tour of the new hospital and were treated to viewing a clinical patient in the MRI. The day was concluded with a short lecture on “how to market dentistry in your practice” and “what dental equipment do you need”. The Dental Forum was a huge success that allowed all participants to create relationships with other veterinarians in our area as well as help

further our knowledge base in equine dentistry. We would like to thank our sponsors for their continued support of Pioneer Equine Hospital and equine veterinary education.
