

North American Regenerative Medicine Conference

On the first weekend of March, Pioneer Equine Hospital sent four of its veterinarians to the North American Regenerative Medicine Conference (NARMC) at Alamo Pintado Equine Medical Center in Santa Ynez Valley, CA. Drs. Brad Jackman, Stephanie Mathis, Julie Wilkins, and Suzanne Brenner were in attendance. The 1st NARMC Conference proved to be a remarkably successful gathering, bringing together hundreds of leaders in regenerative medicine and cell therapy.

Insightful presentations and interactive roundtables gave practitioners, researchers and guests the opportunity to further their collective knowledge of regenerative medicine and its place in clinical practice. Regenerative Medicine and Stem Cell Therapy promises a bright future in veterinary medicine, and together we will advance innovative technologies, techniques and protocols to improve the lives of animal patients. This interactive 2-day program consisted of scientific presentations, live demonstrations & discussions related to all aspects of stem cell therapy and regenerative medicine in horses and other animals. Over 280 attendees joined 25 speakers in the Santa Ynez Valley to enjoy the NARMC Conference.

Prominent research scientists in the field of veterinary and human regenerative medicine and clinicians with substantial experience in the application of stem cell and related therapies gave cutting edge lectures. The equine practitioner roundtable featured over 150 equine veterinarians discussing where and how regenerative medicine fits in the practice of veterinary medicine. Several practitioners presented cases and attendees brought their own case experiences to the session for an open dialogue on therapeutic regenerative medicine applications.

Pioneer Equine Hospital remains on the forefront in regenerative medicine, taking every opportunity to further our knowledge in the area of stem cells and how they relate to your horse. Our veterinarians have years of case experience working with fat-derived and bone marrow-derived stem cells, IRAP, Platelet-rich plasma and other forms of regenerative medicine. If you have questions or think your horse is a candidate for regenerative medicine, give us a call and one of our talented doctors will be happy to explain how it can get you and your horse back in the arena.
